

ATP Electronics' Official Statement Regarding the Novel Coronavirus (2019-nCoV)

5th of February, 2020

In the light of the 2019-nCoV outbreak, we would like to assure all of our partners and customers that the overall business is currently NORMAL and the on-going medical emergency currently has no adverse impact on our daily operations.

We are taking appropriate measures needed to manage risks and to mitigate any effects, particularly in the following areas:

Employees' Health and Safety

At ATP, we are prioritizing the health and safety of our employees and their families, and we are implementing measures in compliance with government regulations to care for them and prevent the spread of the virus.

Current Operations

There is currently no impact to our global market, and our manufacturing as well as sales operations are geared up as usual to meet customers' needs. We have proactively engaged all teams to ensure the sufficiency of components as well as finished products. Our suppliers have confirmed that their operations are likewise normal and that they will continue to support ATP's requirements.

Market and Business Outlook

We do not see any immediate effect for you at this point, but we recognize that the general price trend for NAND and DRAM is already on the upswing with supply forecast to get tighter later this year. In this case, we encourage you to work closely with our valued Distributors/Representatives/Account Managers to get longer and improved visibility of your expected demand and supply need (6 months rolling forecast recommended) to work towards a full supply contingency strategy.

ATP takes your trust seriously and we are totally committed to deliver products as scheduled and continue normal operations. The company is closely monitoring the situation and will address any issue that may arise. We will communicate with you promptly if any changes impacting your business will arise.

For any queries regarding product availability, please do not hesitate to contact the ATP Representative or Distributor in your area.
